

# TRD alignment with *AliAlignmentTracks*

*Dariusz Miśkowiec, GSI Darmstadt*  
*ALICE offline week, 10-Oct-2007*

- 🌐 *intro*
- 🌐 *optimizing alignment procedure*
- 🌐 *determination of residual resolution*
- 🌐 *summary*

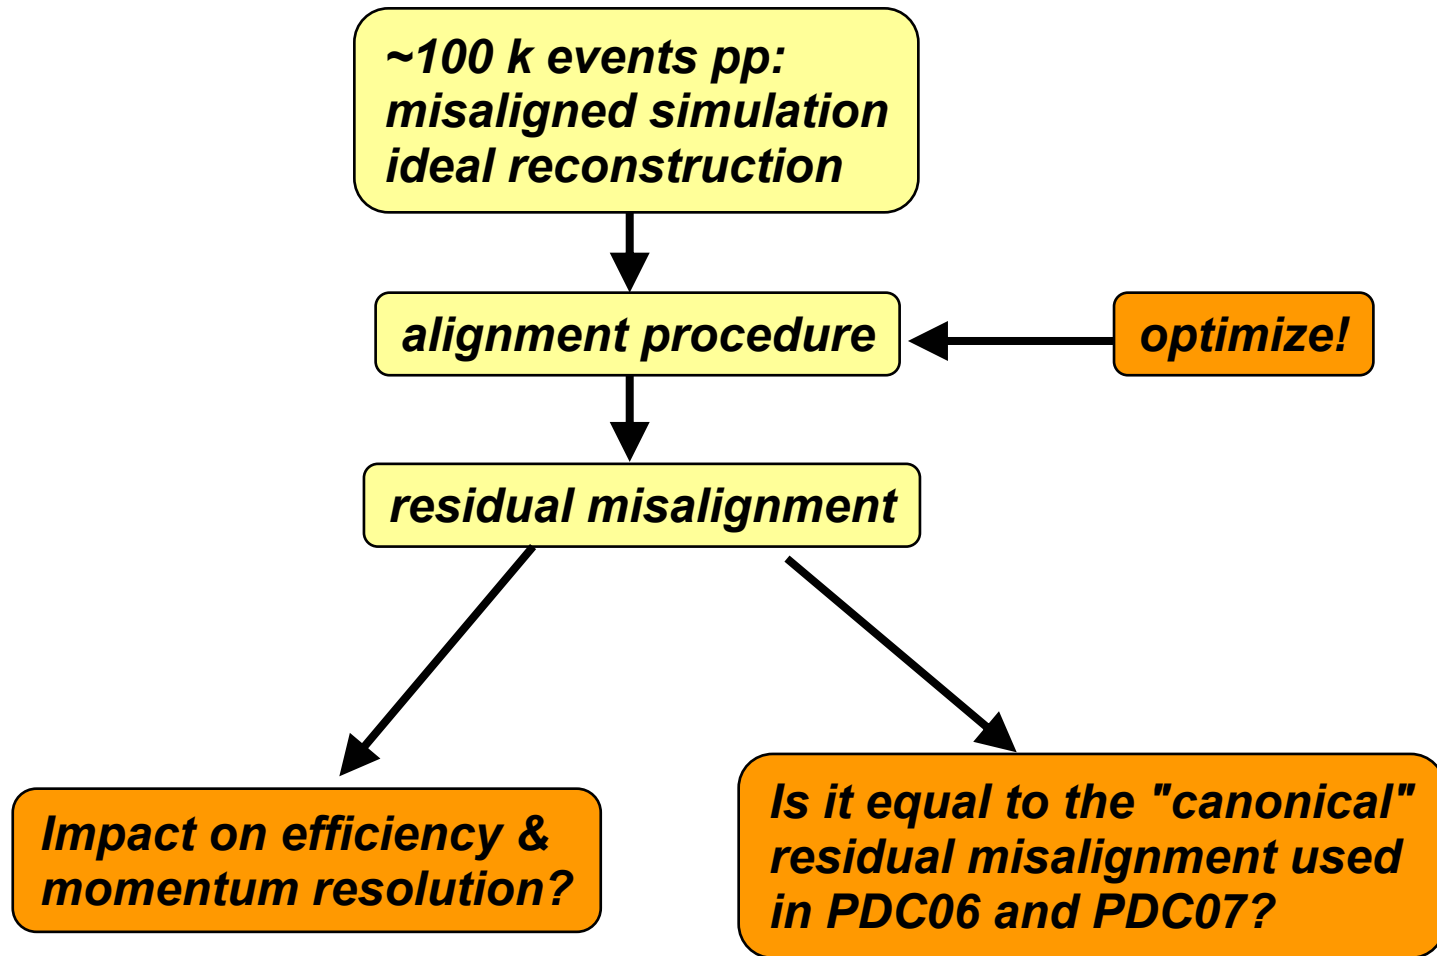

# alignable objects in TRD

18 TRD supermodules  
like **/TRD/sm03**  
aligned by survey

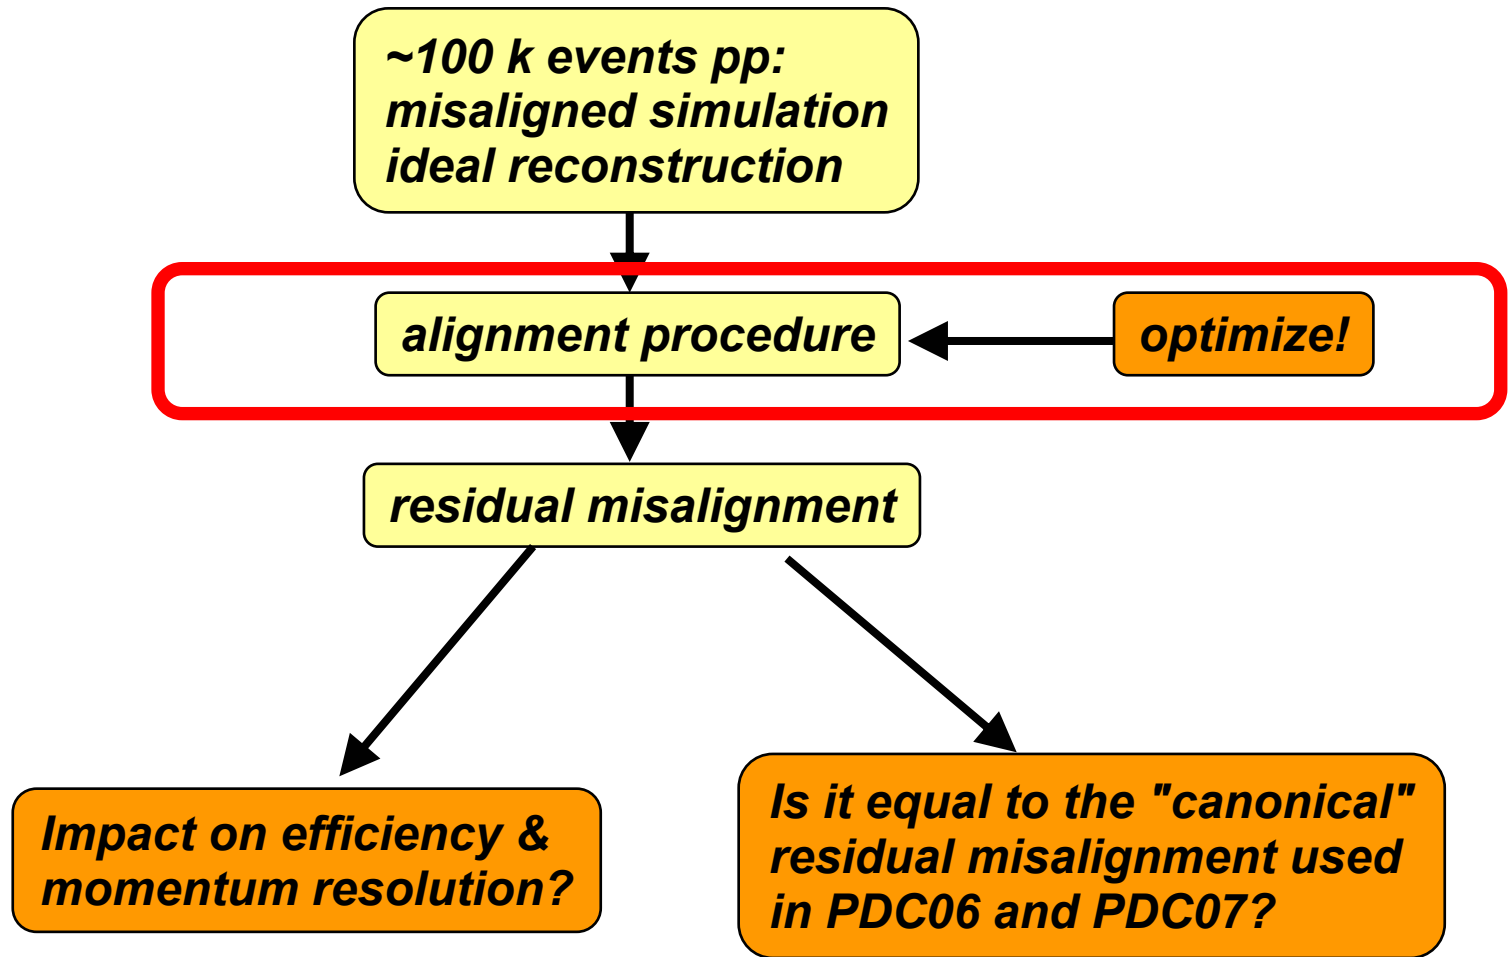

540 TRD chambers  
like **/TRD/sm03/st3/pl0**  
aligned with tracks

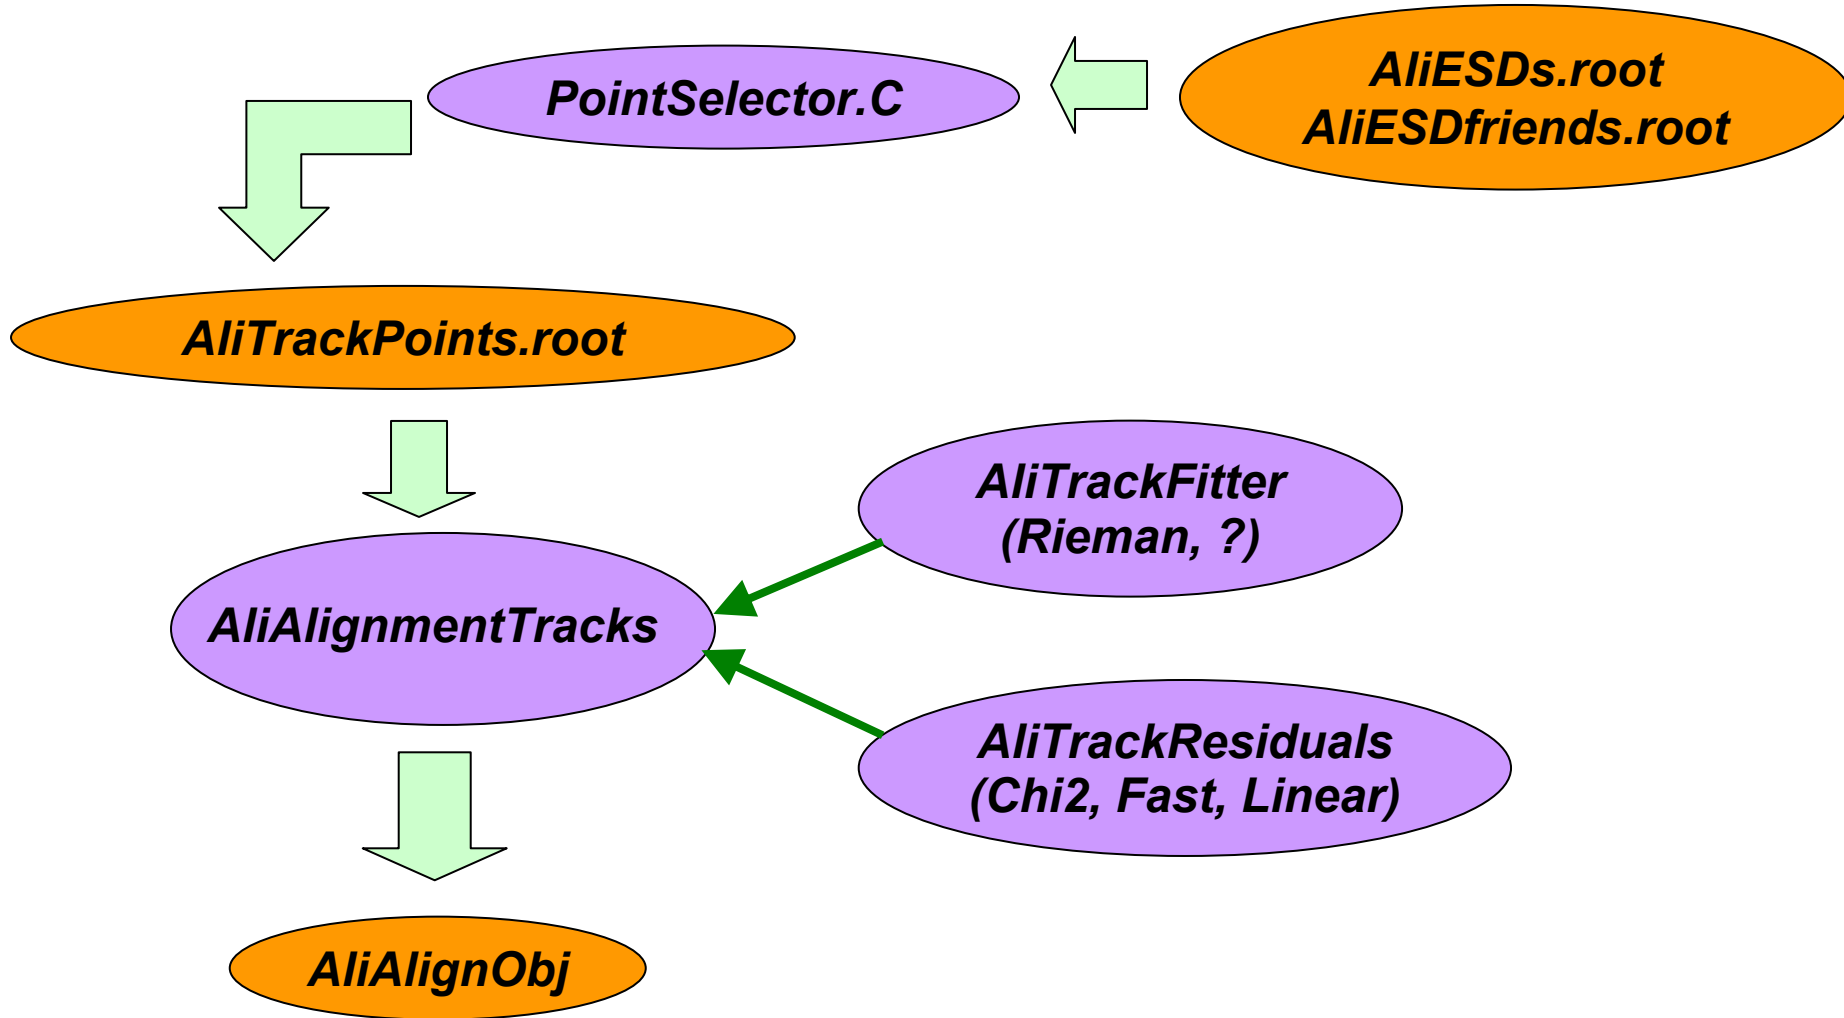

# alignment study via simulation: general idea

# alignment study via simulation: general idea

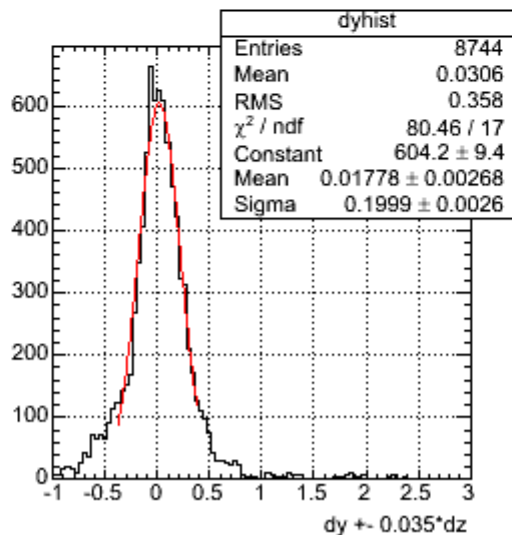

# alignment procedure with *AliAlignmentTracks*

# *practicing the alignment procedure with AliAlignmentTracks*

- 🚫 ***30 k pp events with ideal alignment  
(Silvia Masciocchi's production)***
- 🚫 ***~ 300-400 tracks with  $pt > 0.8$  GeV in each TRD chamber***
- 🚫 ***pick one particular TRD chamber and align it to TPC***
- 🚫 ***look at the residuals along phi***
- 🚫 ***the peak should be at zero and as narrow as possible***

# Does it work for non-zero initial misalignment, too?

- 🌐 **use 10 events with 200 particles with  $pt > 1$  GeV sent in the direction of one particular stack → 400 tracks used to align one chamber**
- 🌐 **introduce misalignment at the beginning of the alignment procedure**
- 🌐 **look at the residuals before alignment (just to get some feeling)**
- 🌐 **look at the residuals after alignment – are they zero centered?**

# alignment study via simulation: general idea

# resolution: results of running alignment on ideal data

# ... and how they compare to our "canonical" values

## canonical values for PDC06:

rdphi (mm)	dz (mm)	dr (mm)	rot phi (mr)	rot z (mr)	rot r (mr)	
3	3	3	0.4	2	0.4	supermodule initial
1	1	1	1	1	0.7	chamber initial
0.02	0.03	0.07	0.3	0.3	0.1	chamber residual

## resolution observed when aligning 40 TRD chambers using 100 k events simulated with ideal geometry

0.09    0.70    0.25    0.8    0.8    0.2

## factor

5    25    4    3    3    2

# summary and next steps

- ☹ ***AliAlignmentTracks with AliTrackResidualsFast works reasonably***
- ☹ ***residual misalignment probably somewhat larger than guessed***
- ☹ ***alignment resolution related to the width of the residual → in many cases playing with one chamber is sufficient***

## ***under investigation***

- ☹ ***more optimization: pt cut, B field, scaling with statistics...***
- ☹ ***impact on efficiency and momentum resolution***

## ***related subjects***

- ☹ ***AliAlignObj storing local misalignment rather than global***

# processing survey data with AliTRDalignment

shift in z – caused by the survey target offset

**The coordinates given in this report are given for the center of the survey target and not for the contact surface.** The following survey target has been used for the measurement of the TRD reference holes:

→ nominal positions of the survey points in AliTRDalignment modified to account for the survey target offset of 20 mm

# processing survey data with AliTRDAlignment

**"r"-coordinate of the two surveyed points:**

365.25 cm from survey  
365.75 cm from drawings (Bernd)  
367.10 cm from offline (my guess, based on  
BTRD being 779 mm thick)

**needs to be understood**
