**fighting
overlaps**

fighting TRD overlaps

- 🚫 *in principle, truncated gaussian OK, but not below the realistic misalignment*
- 🚫 *overlap detection improved in root 521-04 (see next 2 slides) → overlaps now occur as soon as we move a volume*
- 🚫 *misalignments visible in the survey already produce overlaps in geometry*

tracklet

covariance

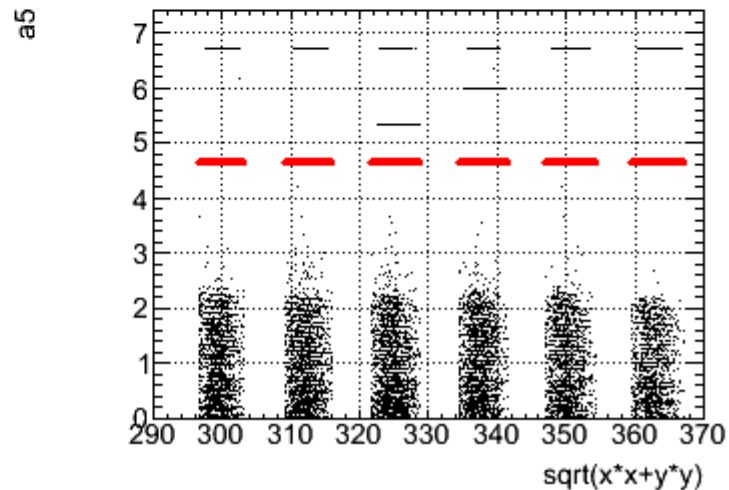

for alignment

tracklet covariance

black – new tracklet-by-tracklet value provided by Alex
red – simple parametrization used till now

tracklet covariance

tracklet covariance

tracklet covariance

- 🚫 *from now on, Alex' covariance will be used*
- 🚫 *the old parametrization was quite OK, except for the sign of the tilt in half of the layers*
- 🚫 *this did not lead to trouble because anyway the fitters used so far (Straight, Rieman) were fitting in two dimensions*
